- Clinical management of aspergillosis and NTM

10:00 Coffee
10:30 - 12.30 Looking Forward - Developing Areas
- Lung volume reduction - what, when and why?
- Computer-aided evaluation of ILD/machine learning
- Artificial intelligence and pulmonary nodule management
- Developments in Nuclear Medicine
Fourteenth Cambridge Chest Meeting
King's College, Cambridge
4-6 April 2018

The Cambridge Chest Meeting is held every three years and, as in the past, there will be an emphasis on lively interdisciplinary discussion. The lectures will address important issues in current clinical and radiological practice. As well as reviews of current clinical best practice, the meeting will provide a forum for presentations of exciting future developments in these fields.

It is hoped that the majority of participants will be residential, as one of the important features of this meeting will be its informality and the opportunity for discussion outside the lecture sessions. The number of participants is strictly limited and early booking is strongly advised as this meeting is always oversubscribed.

The venue for 2018 is in the beautiful setting of King's College. Early booking is recommended, as places are strictly limited.

For further information and details of the speakers please visit www.cambridgechestmeeting.com
